Context of the research activity	Design for social inclusion through participatory, multistakeholder and multi-design-domain approaches for promoting, designing and managing services aimed at preventing and containing the risks and effects of social exclusion and hardship; in integration with the cooperative world, voluntary organisations, associations and public institutions. Progetto finanziato dal PNRR a valere du DM 630 2024 sotto condizione, CUP E14D24002360004. The activation of the position with scholarship is subject to the possible allocation of further funding by the MUR.

Objectives	The research project, in coherence with PNRR's MISSION 5: INCLUSION AND COHESION and its components M5C2 - Social infrastructures, families, communities and third sector and M5C3 - Special interventions for territorial cohesion, aims to support the partner in the innovation - and the monitoring of the related outcomes and impacts - of the social, educational, animative and cultural services, in the direction of implementing forms of prevention and containment of the risks and effects of social exclusion and discomfort. The approach is participative and Design-Anthropology-led, consistent with an operational framework of action-research. It envisages iterative cycles of: desk research; case study research; experimentation, and field observation consistent with the partner's areas of territorial intervention; co-design and co-creation processes for metaproject and project synthesis; impact assessment. The objective is to promote new interventions designed to foster socialisation, citizens participation, and support independent living paths for people with

	disabilities, both intellectual and physical, in conditions of housing emergency and material, educational and health poverty. The expected results concern new and more effective approaches, processes, tools and devices for social cohesion and inclusion, community-based and centred on the capacities of the individual.
Skills and competencies for the development of the activity	Management of social inclusion processes. Management of participatory, multi-user, and multi-stakeholder processes: co-creation; co-design; co-crafting; co-production. Management of in-itinere monitoring processes. Management of impact assessment processes. Management of dissemination, reporting and scientific writing processes. Knowledge of the theoretical framework of the research project's topics.
