Context of the research activity	Residential architecture in Torino from the late 19th to the 21st century in a comparative perspective.
Objectives	Research project on built housing typologies and architectures in Torino 1850-today (and after). Construction of a comprehensive graphic and photographic atlas of modern residential architectures from the late XIXth to the XXIst century, based on literature, archival evidence and on-site surveys; with maps and re-drawing in scale of all projects. Typological, technological and dimensional classification of projects. Critical positioning of the Torino modern housing experience in a global (mainly European) panorama. Selection and discussion of comparables at European and global scale (relevant best practices & projects). Outlining of emerging trends and seminal ongoing experiences in housing, both in Torino and global.
Skills and competencies for the development of the activity	Required: Specific interest in the theme Archival research skills (Italian archives/documents). Literature research skills (Italian and english literature). Drawing skills (redrawing of projects and /or site surveys, BW, Autocad+Illustrator or other comparable graphic packages). Editing skills (Adobe package) Preferred: background experience in housing research / residential architecture research Appreciated: photographic skills (architecture photography)
